

# MHCU Policy Learning Lab

Policy Learning Lab Resource Directory

Moving Healthcare Upstream (MHCU) is a collaborative effort co-led by the Nemours Children's Health System and the University of California, Los Angeles (UCLA) Center for Healthier Children, Families & Communities. MHCU was launched in 2014, with generous support from the Kresge Foundation.

Moving Health Care Upstream (MHCU) creates, tests, and disseminates strategies for producing large-scale, sustainable population health improvements. The focus is on helping health care providers to collaborate with other community-based organizations to help children, patients, and families access new resources to address upstream drivers of health. While the lens is children and families, the work applies generally to communities, and learnings are available to the field at large at [movinghealthcareupstream.org](http://movinghealthcareupstream.org)

# Introduction

For more information, please also see the documents bulleted below, which are available at: [movinghealthcareupstream.org](http://movinghealthcareupstream.org)

- Policy Learning Lab Overview and Lessons Learned;
- Policy Learning Lab Compendium of Research & Technical Assistance Memos; and
- Policy Learning Lab Social Media Best Practices.

Moving Health Care Upstream (MHCU) is based on the belief that health systems can address persistent and costly health inequities by moving “upstream”—beyond the walls of hospitals and clinics and into the communities, collaborating with community-based organizations to address the root causes of disease. The various areas of work within MHCU share a common focus—supporting hospitals and community stakeholders in testing and spreading strategies to move upstream, and sharing “what works” to inform the field and accelerate the upstream movement in the field as a whole. Policy Learning Labs are one example of MHCU’s work to spread knowledge and accelerate action in the field.

Nemours Children’s Health System (Nemours) piloted the Policy Learning Labs under the auspices of MHCU in 2017. They were created to address inter-related challenges in the field:

- 1) **Sustainability, Spread, Scale:** For sustainability, program work must be combined with policy development. Without this connection, even the strongest programs are at risk of becoming one offs and of disappearing with shifts in funding or staffing. Policy can institutionalize good ideas, yet MHCU and others doing similar work have observed that many organizations and communities have not yet developed policies to institutionalize and grow their programs addressing upstream causes of disease and disparities.
- 2) **Capacity:** Local public policy and institutional policy is often developed by groups and coalitions whose members are unpaid volunteers or by those taking on the work on top of their formal accountabilities at work. This has implications for the capacity of those involved.
  - a. **Knowledge & Skill:** Often, clinicians and other practitioners who develop and implement programs are not “policy people,” and don’t have a high level of knowledge or skills related to developing local public policy and/or institutional policy.
  - b. **Dedicated Time:** Despite the potential effectiveness of learning collaboratives, MHCU staff have repeatedly heard that allocating dedicated time for participation is a challenge. Dedicating time to conduct targeted policy research and scans is also challenge for groups and coalitions.

The Policy Learning Lab pilot converted these challenges into opportunities by using a short-term (4 month) process to increase knowledge and skills of members and to provide teams with targeted policy tools (such as research and scans). These skills and tools are intended to accelerate the development of evidence-informed local public policy strategies and/or institutional policy strategies to target upstream causes of disease and disparities.

Topics for Policy Learning Labs (root causes of asthma and food insecurity) were chosen based on the input of health systems already associated with MHCU and were intended to fill a white space in the field. Our 2017 pilot involved seventeen teams: five in the Policy Learning Lab focused on root causes of asthma and twelve in the Policy Learning Lab focused on food insecurity (broken into two groups with six teams per group). Each team consisted of a health care organization plus an entity from at least one other sector. A list of teams in each Lab is included in *Policy Learning Lab Overview and Lessons Learned* and also in the *Policy Learning Lab Compendium of Research & Technical Assistance Memos*. Please visit [movinghealthcareupstream.org](http://movinghealthcareupstream.org) to access these documents.

Nemours contracted with [ChangeLab Solutions](#) as our lead partner in this pilot based on their subject matter expertise on our chosen topics as well as their expertise in providing technical assistance on the development of local public policy and institutional policy. The expertise of ChangeLab Solutions was supplemented by additional subject matter experts who were involved on an as-needed basis, based on the needs of teams. Subject matter experts for the teams focused on root causes of asthma included [Green & Healthy Homes Initiative](#) and [Nemours Health & Prevention Services](#). Experts for teams focused on food insecurity included [Feed1st at the University of Chicago's Lindau Lab](#), [Root Cause Coalition](#) and [Prevention Institute](#).

To learn more about Moving Health Care Upstream, please visit [movinghealthcareupstream.org](http://movinghealthcareupstream.org) and follow us on Twitter [@MHCUupstream](#).

For questions, please email [MHCU@nemours.org](mailto:MHCU@nemours.org).
